AUTHOR	Hickey, Thomas B.
TITLE	Research Report on Field, Subfield, and Indicator Statistics in OCLC Bibliographic Records.
INSTITUTION	Ohio Coll. Library Center, Columbus.
REPORT NO	OCLC/OPR/RR-81/1
PUB DATE	23 Mar 81
NOTE	147p.
EDRS PRICE	MF01/PC06 Plus Postage.
DESCRIPTORS	*Data Analysis; *Databases; Online Systems; Statistics; *Union Catalogs
IDENTIFIERS	*OCLC

ABSTRACT

The statistics that are presented are based on a one percent systematic sample of the OCLC online union catalog as of January 1980. Detailed data were collected on the use of fields, subfields, indicators in bibliographic records, and on the co-occurrence of fields within bibliographic records. The sample used for the study was obtained by extracting all records with an OCLC control number ending in 44. For each category of this report, the statistics are grouped by format: monographs, serials, audiovisuals, sound recordings, music scores, maps, manuscripts, and cumulative bibliographic files. These statistics should be useful for estimating file growth, selecting subsets of records for local catalogs, and for designing bibliographic record data bases. (Author/RAA)

MATERIAL HAS BEEN GRANTED BY
Lois Yoakum

TO THE EDUCATIONAL RESOURCES
INFORMATION CENTER (ERIC)."

The Research Report Series is OCLC's formal dissemination vehicle through which OCLC research project results can be made public.

The Research Department's Research Reports are published and distributed through OCLC, until the report is available from ERIC (approximately six to nine months after publication). A maximum of three copies of any single Research Report is provided at no charge to interested persons and institutions. Requests for Research Reports should be directed to OCLC, User Services Division, Installation Services Section, 6565 Frantz Road, Dublin, OH 43017.

Field, Subfield, and Indicator Statistics in OCLC Bibliographic Records
by T. B. Hickey
Report Number: OCLC/OPR/RR-81/1

ABSTRACT

Detailed statistics were collected on the use of fields, subfields, and indicators in bibliographic records and on the co-occurrence of fields within bibliographic records. Statistics were derived from an analysis of a 1% systematic sample of the OCLC Online Union Catalog as of 1980 January. The report includes statistics for each MARC format (e.g., maps, manuscripts, serials) and for the overall sample.

ACKNOWLEDGMENTS

The author acknowledges the efforts of staff in the Data Base Administration Section, Computer Systems Engineering Department, OCLC, in extracting the sample of records used in this report. In addition, the author thanks Ronald Ringenberg for maintaining the sample data base, and thanks Peggy Zimbeck for editorial assistance.

NOTE ABOUT THE AUTHOR

Dr. Thomas B. Hickey has been with OCLC for over three years. He is currently a Research Scientist in the Research Department.

Dr. Hickey holds a B.S. in Physics from the State University of New York (SUNY) at Stony Brook, a M.L.S. in Library Science from SUNY at Geneseo, and a Ph.D. in Library Science from the University of Illinois. His current areas of interest at OCLC include automatic matching of author names for authority control and electronic document delivery.

I. DESCRIPTION OF THE SAMPLE

OCLC (Online Computer Library Center), a not-for-profit corporation based in Dublin, Ohio, operates a computerized library network for academic, public, federal, and special libraries.

OCLC maintains online what may be the largest file of cataloging data in existence, the Online Union Catalog. The Online Union Catalog currently contains over 7.2 million bibliographic records and 75 million holdings locations. Over 3,800 terminals in 2,500 libraries throughout the country access the file.

Member libraries update Online Union Catalog records online in real time so that each library's cataloging is instantly available to all libraries as soon as it is entered online. Approximately 80% of the Online Union Catalog is entered online by OCLC member libraries. The remainder of the file includes records from the national libraries (National Library of Medicine, Library of Congress) and is loaded in batch mode.

The Online Union Catalog is expanding rapidly with over one million records being added each year. In general, however, the basic characteristics of the file change slowly. Changes such as loading Library of Congress map records or National Library of Medicine records can have a substantial impact on the proportions of the file in each format, and to a lesser degree can affect statistics on field use.

Statistics on lengths and occurrence of fields, subfields and indicators, and co-occurrence of fields, were collected from a 1% systematic sample of the Online Union Catalog as of 1980 January 2. The sample was obtained by extracting all records with an OCLC control number ending in "44." The sample, therefore, contained record number "44," "144," "244," etc., with the exception of any deleted records.

For each chapter of this report, statistics are grouped by format--Monographs, Serials, Audio/Visual, Sound Recordings, Music Scores, Maps, Manuscripts, and cumulative files (Bibliographic).

Caution should be used when examining statistics on the smaller files, especially in the manuscripts format. The manuscript record sample is so small (192 records) that few generalizations on field, subfield, or indicator use can be drawn from it.

These statistics should be useful in estimating file growth, selecting subsets of records for local catalogs, and for any design of bibliographic record data bases.

II. BIBLIOGRAPHIC RECORD FIELD STATISTICS

Table 1 summarizes the statistics on lengths and occurrence of fields in bibliographic records. An explanation of terms used within the table is presented below:

FORMAT	MARC format used to enter material.
ABBREVIATION	Abbreviation for format used in statistics tables.
# OF RECORDS	Sample size for each format.
% OF DATA BASE	Percentage of the sample data base constituting the format.
# OF DIF FIELDS	Total number of unique tags found.
FIELDS/RECORD	Average number of (not necessarily unique) fields found per record.
AVG FIELD LENGTH	Field length in characters including the indicators and any subfield codes, but not the bytes containing field length, tag, or the end of field mark.
WORDS/FIELD	Average number of "words" found per record divided by the average number of fields found per record. Any character string delimited by blanks is considered a word.
TOTAL LENGTH OF FIELDS/RECORD	Except for rounding errors, this is the product of FIELDS/RECORD and AVG FIELD LENGTH. Note that none of the "fixed field" information, e.g., directory, etc., is counted.

Table 1. Summary Statistics on Lengths and Occurrence of Fields

FORMAT	ABBREVIATION	# OF RECORDS	% OF DATA BASE	# OF DIF FIELDS	FIELDS/ RECORD	AVG FIELD LENGTH	WORDS/ FIELD	TOTAL LENGTH OF FIELDS/RECORD
All	BIB	58,375	100.0	149	9.86	38.99	5.54	384.44
Monographs	MON	50,262	86.1	76	9.50	39.08	5.56	371.03
Serials	SER	3,645	6.2	109	11.33	33.55	4.39	380.11
Audio/ Visual	FIL	1,427	2.4	52	14.73	47.30	6.94	696.73
Sound Recordings	MUS	1,102	1.9	57	13.37	42.26	6.04	564.95
Music Scores	MSS	1,055	1.8	43	10.09	37.83	5.68	381.52
Maps	MAP	692	1.2	41	12.61	35.90	5.30	452.83
Manuscripts	MAN	192	0.3	41	9.77	40.05	5.50	391.08

Tables 2 through 9 present field statistics for the entire sample and for each format. The formats are ordered by decreasing number of records found in the sample. Following is an explanation of the table headings used in tables 2 through 9. Field lengths are in characters and do not include the field terminator, field tag, or field length bytes.

TAG	Tag for field being counted.
TOT OCC	Total number of these fields found in sample.
% OF REC	Percent of records which contained at least one occurrence of this field.
OCC/ REC	Total occurrence divided by number of records in sample.
LENG/ REC	Given that a record contains at least one of these fields, this is the average length of the fields, including multiple occurrences.
LENG/ OCC	Average length of field each time it occurs.
CHAR/ REC	Length of this field averaged over all records.
MAX LENG	Maximum length of field found in sample.
LENG/OC S.D.	Standard deviation of LENG/OCC.
# OF BADSFCS	Number of subfields found in which the subfield code was not a lowercase letter.

Table 2. Field Statistics from 58,375 Bibliographic Records

III. BIBLIOGRAPHIC RECORD SUBFIELD STATISTICS

Table 10 summarizes statistics on the lengths and occurrence of subfields in bibliographic records. An explanation of the terms used within the table is shown below:

FORMAT	MARC format used to enter material.
ABBREVIATION	Abbreviation for format used in statistics tables.
# OF RECORDS	Sample size for each format.
% OF DATA BASE	Percentage of the sample data base constituting the format.
# OF DIF SUBFIELDS	Total number of unique field-subfield combinations found in this sample.
SUBFIELDS/RECORD	Average number (not necessarily unique) of subfields found per record.
SUBFIELDS/FIELD	Average number (not necessarily unique) of subfields found per field.
WORDS/SUBFIELD	Average number of "words" contained in each subfield of each record. Any character string delimited by blanks is considered a word.
TOTAL LENGTH OF SUBF/REC	Actual amount of data, measured in characters, found in these subfields, ignoring length, tagging, subfield indicators, and terminators.

Table 10. Summary Statistics on Length and Occurrence of Subfields

FORMAT	ABBREVIATION	# OF RECORDS	% OF DATA BASE	# OF DIF SUBFIELDS	SUBFIELDS/ RECORD	SUBFIELDS/ FIELD	WORDS/ SUBFIELD	TOTAL LENGTH OF SUBF/REC
All	BIB	58,375	100.0	597	18.12	1.84	3.01	347.77

Tables 11 through 18 present subfield statistics for the entire sample and for each format. The formats are ordered by decreasing number of records found in the sample. Below is an explanation of headings used in tables 11 through 18. Subfield lengths are in characters and do not include the subfield delimiter or code.

TAG	Field in which subfield occurs.
SUB CODE	Subfield code being counted.
TOT OCC	Total number of occurrences of this subfield found.
% OF FLD	Percentage of this field which contains at least one occurrence of this subfield.
OCC/ REC	Total number of occurrences divided by number of records in sample.
LENG/OC IN FLD	Given that a field contains at least one of these subfields, this is the average length of the subfields, including multiple occurrences within an occurrence of the field.
LENG/ FLD	Average length of subfields over all occurrences of this field.
LENG/ OCC	Average length of each occurrence of this subfield.
CHAR/ REC	Average length per record (including records that do not contain any occurrences of this subfield).
MAX LENG	Maximum length of a single instance of this subfield, excluding subfield delimiter and subfield code.
LENG/OC S.D.	Standard deviation of LENG/OCC.
WORDS/ OCC	Average number of "words" per occurrence. Any character string delimited by blanks is counted as a word.

IV. BIBLIOGRAPHIC RECORD INDICATOR STATISTICS

Tables 19 through 26 present indicator-use statistics for the entire sample and for each format. The formats are ordered by decreasing number of records found in the sample.

Within each table, two rows are shown for each tag that occurred in a record. The first row is for indicator 1 (IND 1) and the second row is for indicator 2 (IND 2). Each of these rows within each tag has 12 columns. The columns are labeled "0" through "9," "BLANK," and "OTHER." The numbers in these columns indicate the percentage of occurrences of that character (or a blank or some other character) in that indicator. For example, the filing indicator (indicator 2) of the 245 field is set to "3" in 2.669% of the records in the combined sample. For this same indicator, some other character ("OTHER") occurred in 32.218% of the records. (This indicator is required, but OCLC members can enter records without setting it. Although this filing indicator displays as a blank at an OCLC terminal, it is stored internally as an illegal character and counted in "OTHER" in these statistics.)

V. CO-OCCURRENCE OF FIELDS IN BIBLIOGRAPHIC RECORDS

Occasionally one needs to know how often two fields both occur in the same record. For example, it may be important to know the frequency with which different author fields occur when designing a search system. Tables in this chapter give exactly such information, as extracted from the sample of 58,375 bibliographic records.

Tables 27 through 35 are presented in a triangular array so that the co-occurrence of two fields appears once in each table. To locate a co-occurrence, the reader should first locate the table with the numerically lower of two fields' tags in the column heading. Then, the reader should locate the second tag in the row heading of the same table.

For example, to determine how many times fields with tags "100" (personal name main entry) and "710" (corporate name added entry) co-occurred, the reader would first find the table with the column labeled "100." This can be found in table 29, page 132. Then the reader would locate the row labeled "710" on this table. Where the column and row intersect, the value is "2,670." This means that 2,670 out of 58,375, or 4.57% of the records had both those fields occur.

The figures are presented as actual counts instead of percentages to give the reader a feeling as to the reliability of the figures. Obviously, for those fields with little co-occurrence, random sampling error will have a strong effect on the values.

Figure 1 presents the co-occurrence data in a rectangular array. Each cell of the graph's density was controlled by the logarithm of the number of co-occurrences. Some features are visible even at the reduction needed to include this figure in the report. The heavy diagonal line shows that every time a field occurred, it was counted as co-occurring with itself. Dark horizontal and vertical lines represent commonly occurring fields such as 100 and 245 (title statement).
